

## **Re-Structure Marine Products** A BETTER WAY

### **Product Data Sheet** **Professional Marine Implantor Seal-It** **Stock Number (7094), (7095)**

Re-Structure Marine Products tests all products prior to offering them to our customers. We tested Professional Marine Implantor Seal-it on various surfaces and materials with each test meeting or exceeding our expectations.

Implantor Seal-It is a Nanotechnology developed Non-Solvent VOC compliant water-based penetrating Implantor specifically designed to protect fiberglass, Inflatable boats, bare and painted wood, canvas, sails, lines, fenders, transoms, swim steps, leather, vinyl, Plexiglas, corian, power cords, and granite against the harmful affects of stains, dust, dirt, oil, salt spray and engine exhaust.

Professional Marine Implantor Seal-It is applied to clean non-oxidized surface or material by spraying, wiping, brushing or rolling. At this point, the nano implanting particles have started to penetrate and bond with the surface or material. It takes 12 hours for the implanting process to cure and bond with the surface or material at the molecular level. After 12 hours, a second coat of Marine Implantor Seal-it can be applied to increase the degree of protection.

Professional Marine Implantor Seal-It is excellent for use in engine rooms and bilges and on fiberglass or wood boat transoms to eliminate the build up of oil and soot caused by engine exhaust.

Professional Marine Implantor Seal-It is safe for use on all exterior and interior boat and materials.

#### **What is Nanotechnology?**

Nanotechnology first introduced in 1959 is a manufacturing technology for producing materials and substances at the nanoscale level.

In the metric system of measurement, "Nano" equals a billionth and therefore a nanometer is one-billionth of a meter. References to nano materials, nano devices and nanopowders simply mean the material can be measured in nanometers. To appreciate the size, a human red blood cell is over 2,000 nanometers long, virtually outside the nanoscale range!

***Re-Structure Marine Products Professional Marine Implantor Seal-It is available in one gallon bottles and 12-ounce spray bottle containers.***
