## Re-Structure Marine Products Professional Marine Mirasol (Stock Number 7007)

Re-Structure Marine Products Professional Mirasol is based on the Nanotechnology derived substance, MBSilane® which is manufactured by MB International USA CO. This substance gives Mirasol its unique polishing capability. Mirasol does not contain any abrasives and will not scratch or mar surfaces to which it is applied properly. Marine Polish is excellent for use on any clean surface such as fiberglass, fiberglass gel coat, stainless steel, chrome, polished aluminum, plastic, plexiglass, corian countertops, granite and painted or varnished woods.

Nanotechnology is the term used to describe a manufacturing technology for producing materials and substances at the nanoscale level. In the metric system of measurement, "Nano" equals a billionth and therefore a nanometer is one-billionth of a meter.

The particles in MBSilane®, the main substance in products offered by Re-Structure Marine Products line are measured in the nano scale or at the molecular level. This small particulate size gives our Professional Mirasol the unique ability to fill in the pores and seal and protect surfaces to which it is applied with a rock hard finish.

Professional Marine Mirasol Seals and protects against the harmful effects of UV rays, Bird Droppings, Salt Spray, Food Stains, Glue and Oxidation. It is excellent for "quick detailing" and creating a high gloss, rock hard glass like shine on fiberglass gel coat and stainless steel. Mirasol is safe for use on interior boat surfaces such as countertops, varnished woods, leather, mirrors and Plexiglas.

Professional Marine Mirasol is applied to clean non-oxidized surface using a soft cloth in a brisk circular motion until a high gloss shine appears. At this point, the nano particles have bonded with the surface filling in pores and scratches and leaving a level rock hard glass like finish. One application of Mirasol will last for 6 months.

***Re-Structure Marine Products Professional Marine Mirasol is available in 12 ounce and 1 gallon sizes.***
