It Shines!”*

**Re-Structure Marine Products**

An environmentally safe way to  
seal and protect boat surfaces from  
the harmful affects of sunlight, ultra violet  
rays, bird droppings, salt spray, and more!

- No Solvents or Petroleum Distillates
- Contains Zero Petroleum
- Water based RALG®

**Non-Solvent**

**Zero Petroleum**

**Water Based Products**

### Professional Marine Polish

12 oz \$29.95 / gallon \$285.00

Based on a Nanotechnology derived substance, RALG®. This substance gives **Marine Polish** its unique polishing capability. **Marine Polish** does not contain any abrasives and will not scratch or mar surfaces to which it is applied properly.

The pores of gel coat absorb nature's elements such as moisture, salt residue, UV rays, airborne dirt particles, and bird droppings. Sealing the pores is the only long-term protection. **Marine Polish** with its Nanotechnology based formulation, seals, gel-coat and paint, pores and minor scratches with a level, rock hard, glass-like finish. **Marine Polish** is excellent for use on any clean surface such as fiberglass, gel coat, any paint type, stainless steel, chrome, polished aluminum, plastic, plexiglass, corian countertops, granite, and painted or varnished woods.

Apply Professional Marine Polish to clean, non-oxidized surface using a soft cloth in a brisk circular motion, **"Rub It On Until It Shines"**, NO machine buffing required. Formulated for hand application only. Apply in a THIN coat – "One Drop Covers One Square Foot."

**DO NOT** use **Professional Marine Polish** with a machine buffing wheel.

*\* Try using Marine Polish on your glasses & sunglasses!*

### Professional Micro Finishing Compound

12 oz \$29.95 / gallon \$285.00

**Professional Micro Finishing Compound** with RALG® should be used to remove mild oxidation, scratches, and blemishes from fiberglass and gel coat.

Apply the compound to clean surface using a soft cloth in a brisk circular motion until the oxidation or scratches have been removed. At this point, the nano particles have bonded with the surface filling in pores and scratches and leaving a level, rock hard, glass-like finish. For long lasting protection, apply a thin coat of Professional Marine Polish. **Micro Finishing Compound** has no abrasives or rouges, so will not remove any damaged gelcoat. You will need to use a rubbing compound and buffer to bring your gel coats natural shine back.

**Professional Micro Finishing Compound** may be used with a low or medium speed buffing machine 1800 RPM MAXIMUM. Use Sparingly.

There is no trick to Re-Structure Marine products. These nano technology formulas BOND chemically, on a molecular level, filling pores from beneath the surface. Leaving a rock hard, glass-like surface, that dirt will not penetrate.

### Marine Mirasol Sealant Spray

12 oz \$21.95 / gallon \$210.00

**Marine Mirasol Sealant Spray** provides a glass like, hard coating that maintains a protective seal on fiberglass, stainless steel, and polished aluminum for a period of up to 6 months. Just wipe it on.

**Marine Mirasol Sealant Spray** enhances the shine and extends the life of **Marine Polish**. **Marine Mirasol Sealant Spray** protects all your interior surfaces, corian, granite, sinks, faucets, shower door glass, vinyl, and leather.

For all interiors, the best time to apply **Marine Mirasol Sealant Spray** is when a boat is new; thereby keeping the showroom fresh quality for up to 6 months - regardless of use. For boats without anti-fouling bottom paint, fast speedsters, trailer boats of all kinds, HBI's, day boats, skiffs, racing sailboats, dinghies and personal watercraft, an application of **Marine Mirasol Sealant Spray** to both top sides and the hull - following a wash down after haul out - will seal and protect the entire boat for up to 6 months. **Marine Mirasol Sealant Spray** also works on skis and surfboards . As **Marine Mirasol Sealant Spray** hardens, it levels the surface with a rock hard, glass-like finish that creates the superior shine.

- One (1) drop on your finger, covers one square foot – **"Rub It On Until It Shines"**
- Remember: apply sparingly, a thin coat.
